

Step 1:

Open one of the .PSD files to start editing a clock element. For this tutorial, we're starting with the second hand.

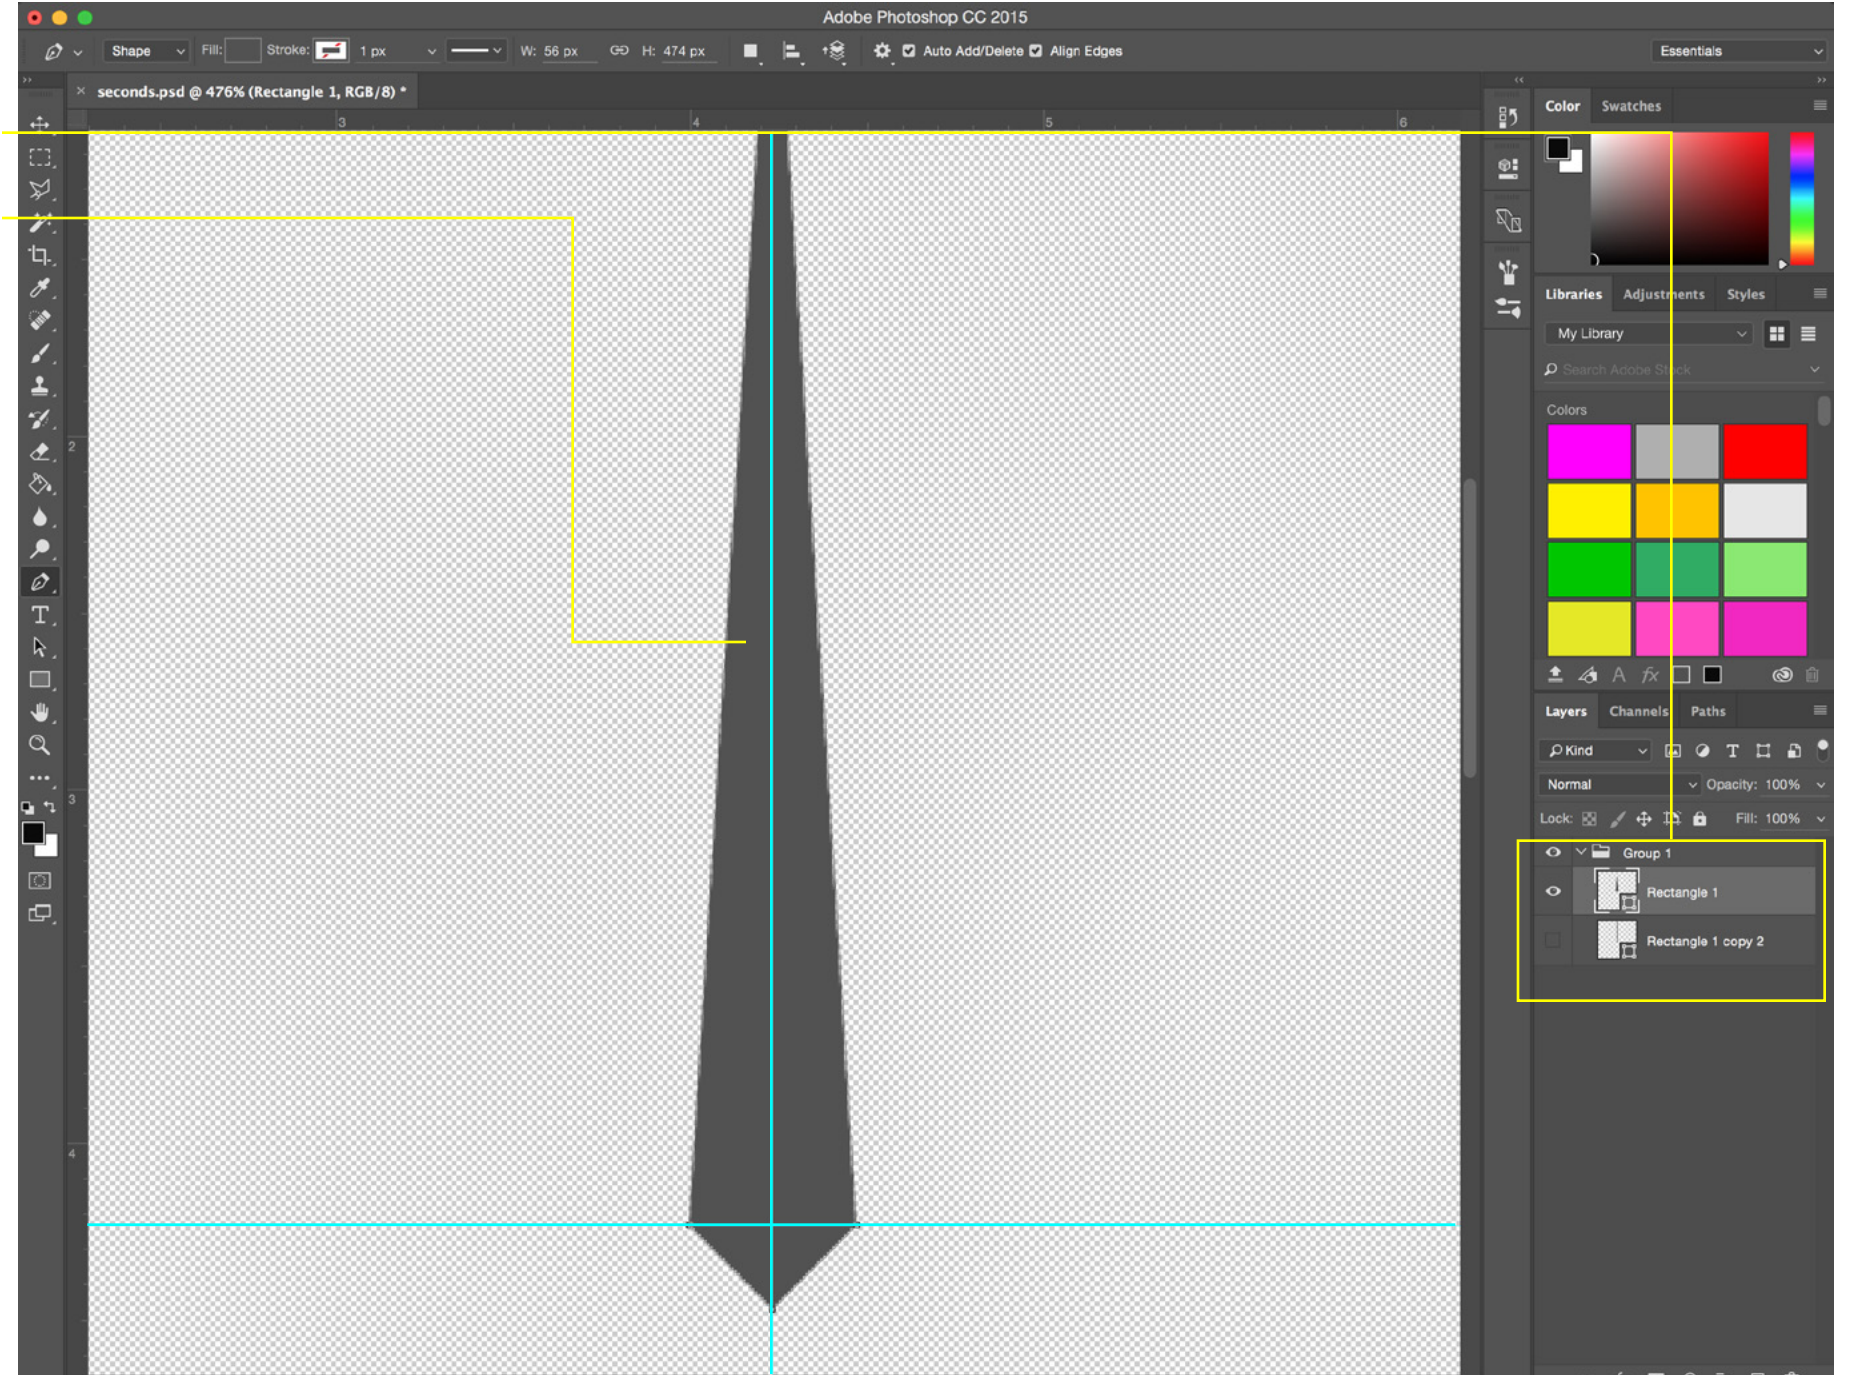

Make sure you have guides turned on, as these will mark the centre point of each element. This is the point of rotation.

Step 2:

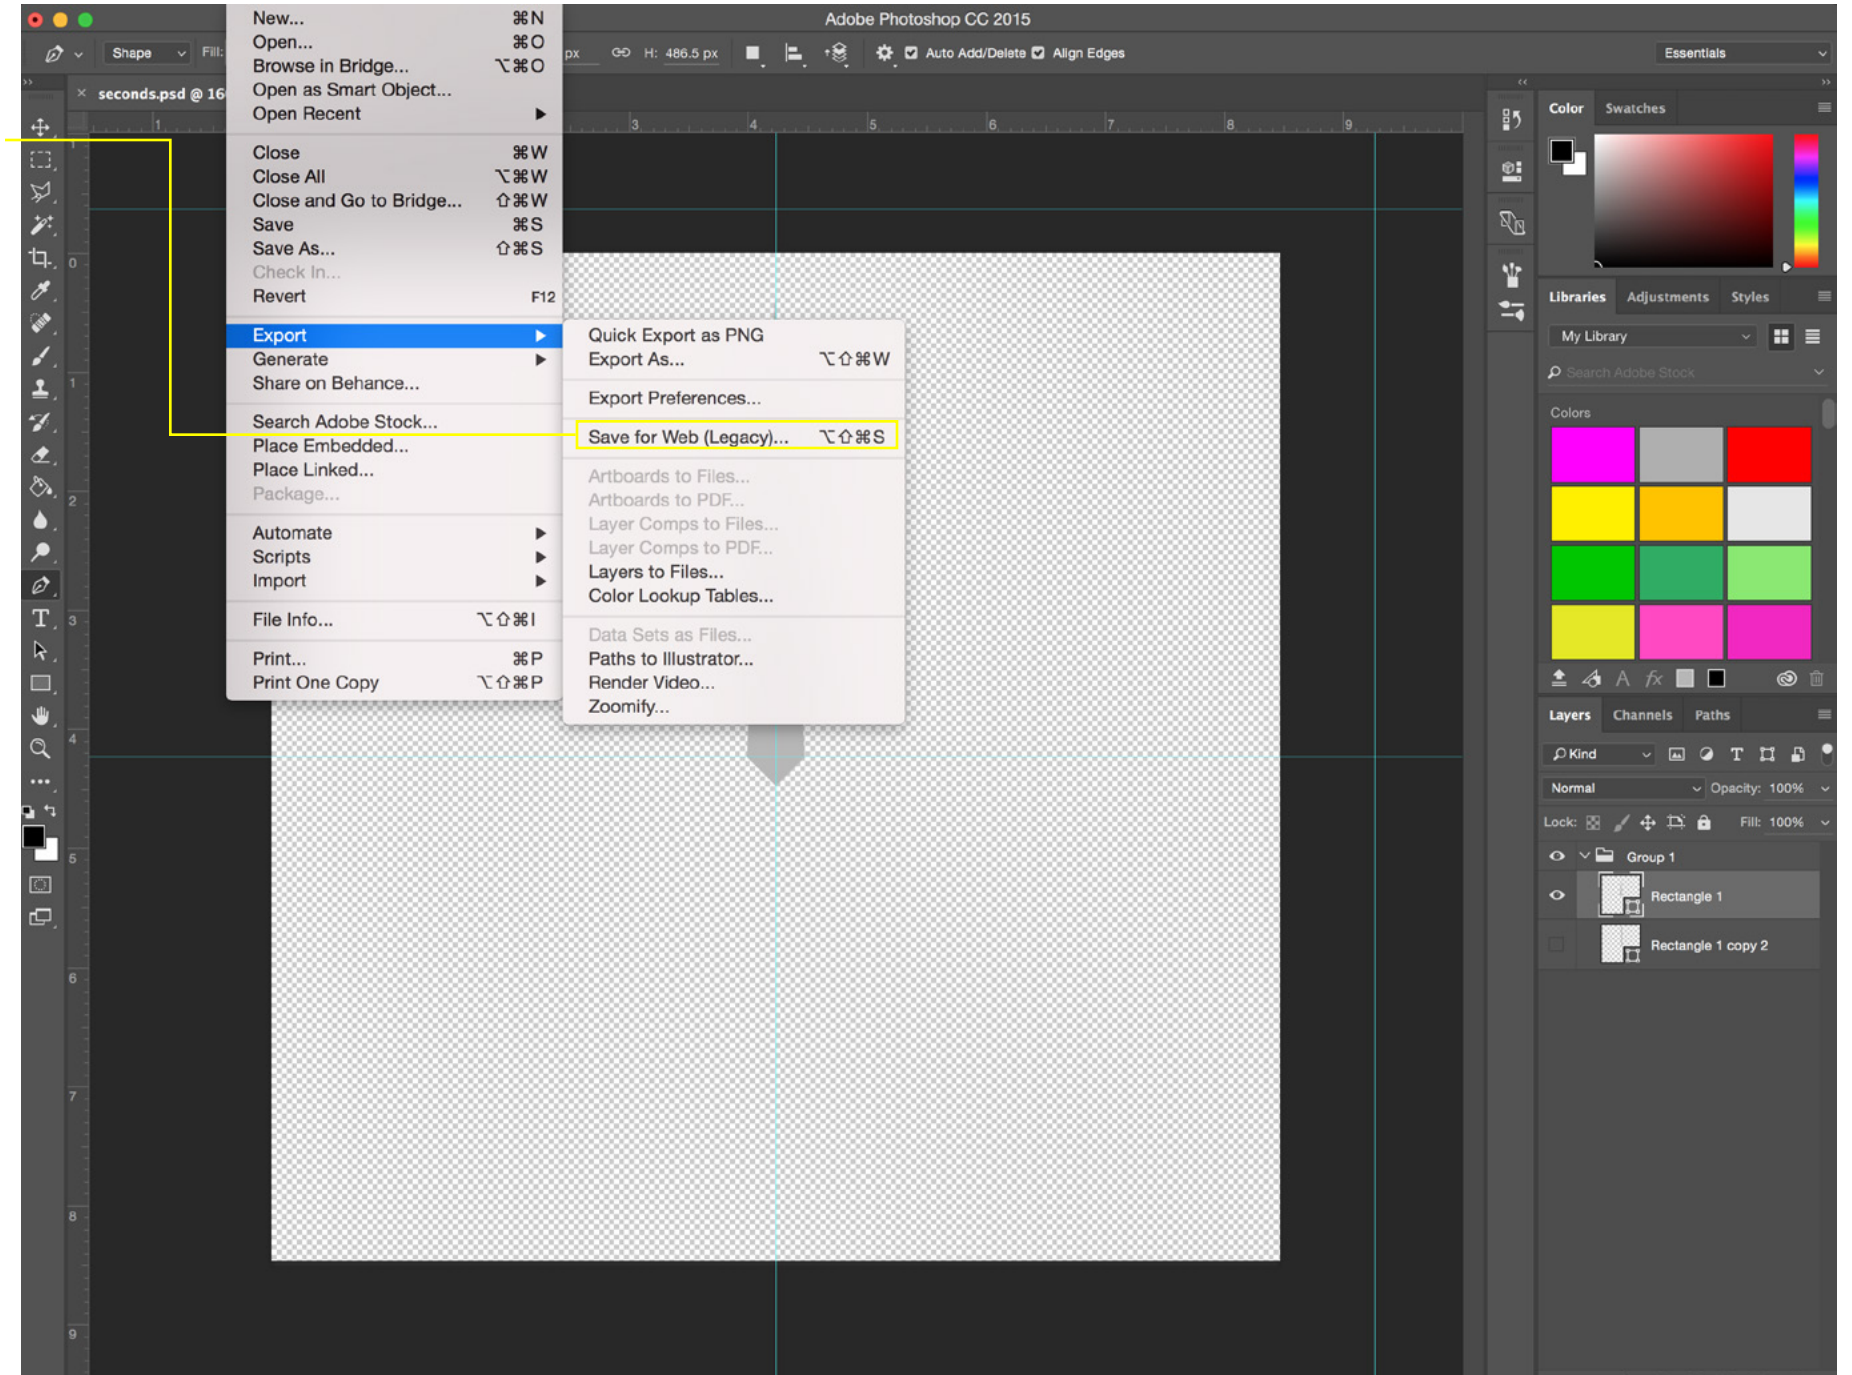

Hide the first layer and create a new one.

On the new layer, draw a shape or import an image. This will be your hand.

Step 3:

Once you're happy with the hand, select
File > Export > Save for Web

Step 4:

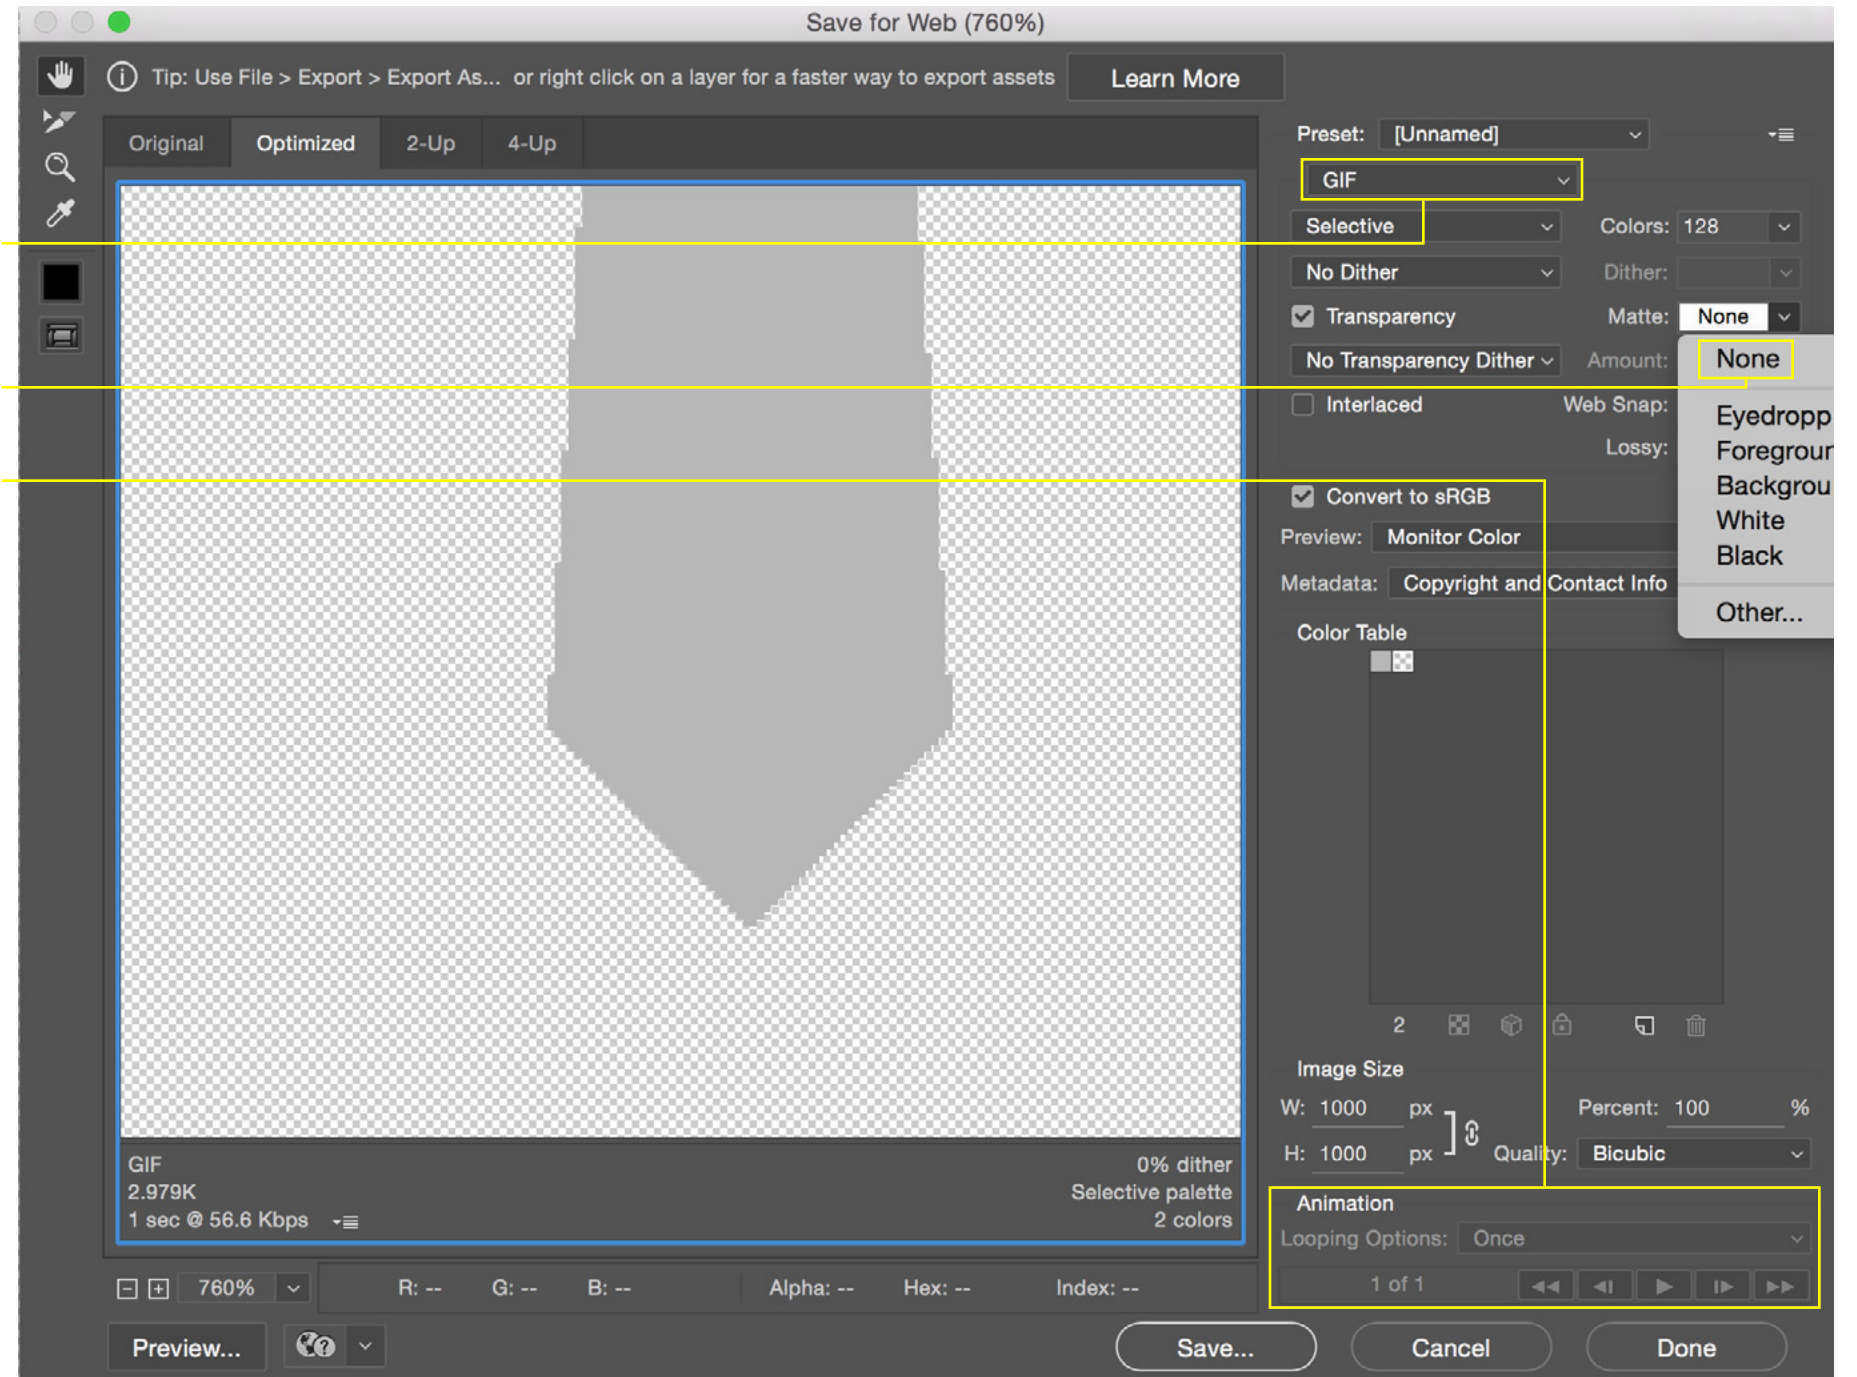

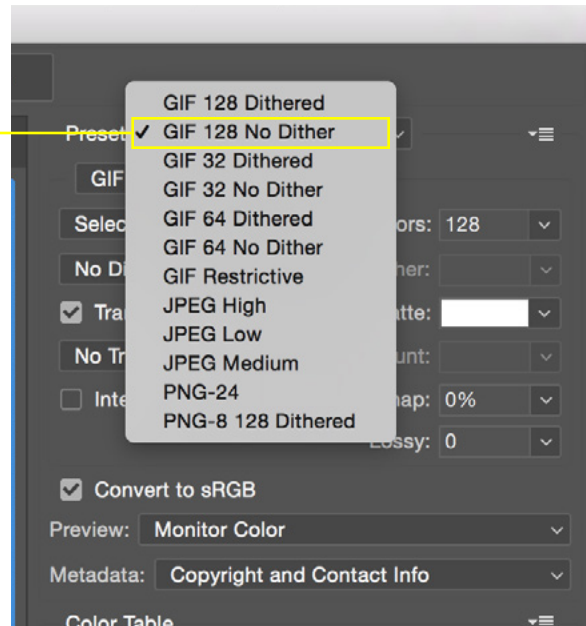

When this window pops up, you can choose these settings:

Change the file type to 'GIF'

Under 'Preset', select 'GIF 128 No Dither'

Under 'Matte' select 'None'

If you have made an animation, set 'Looping Option' to 'Forever'

Step 5:

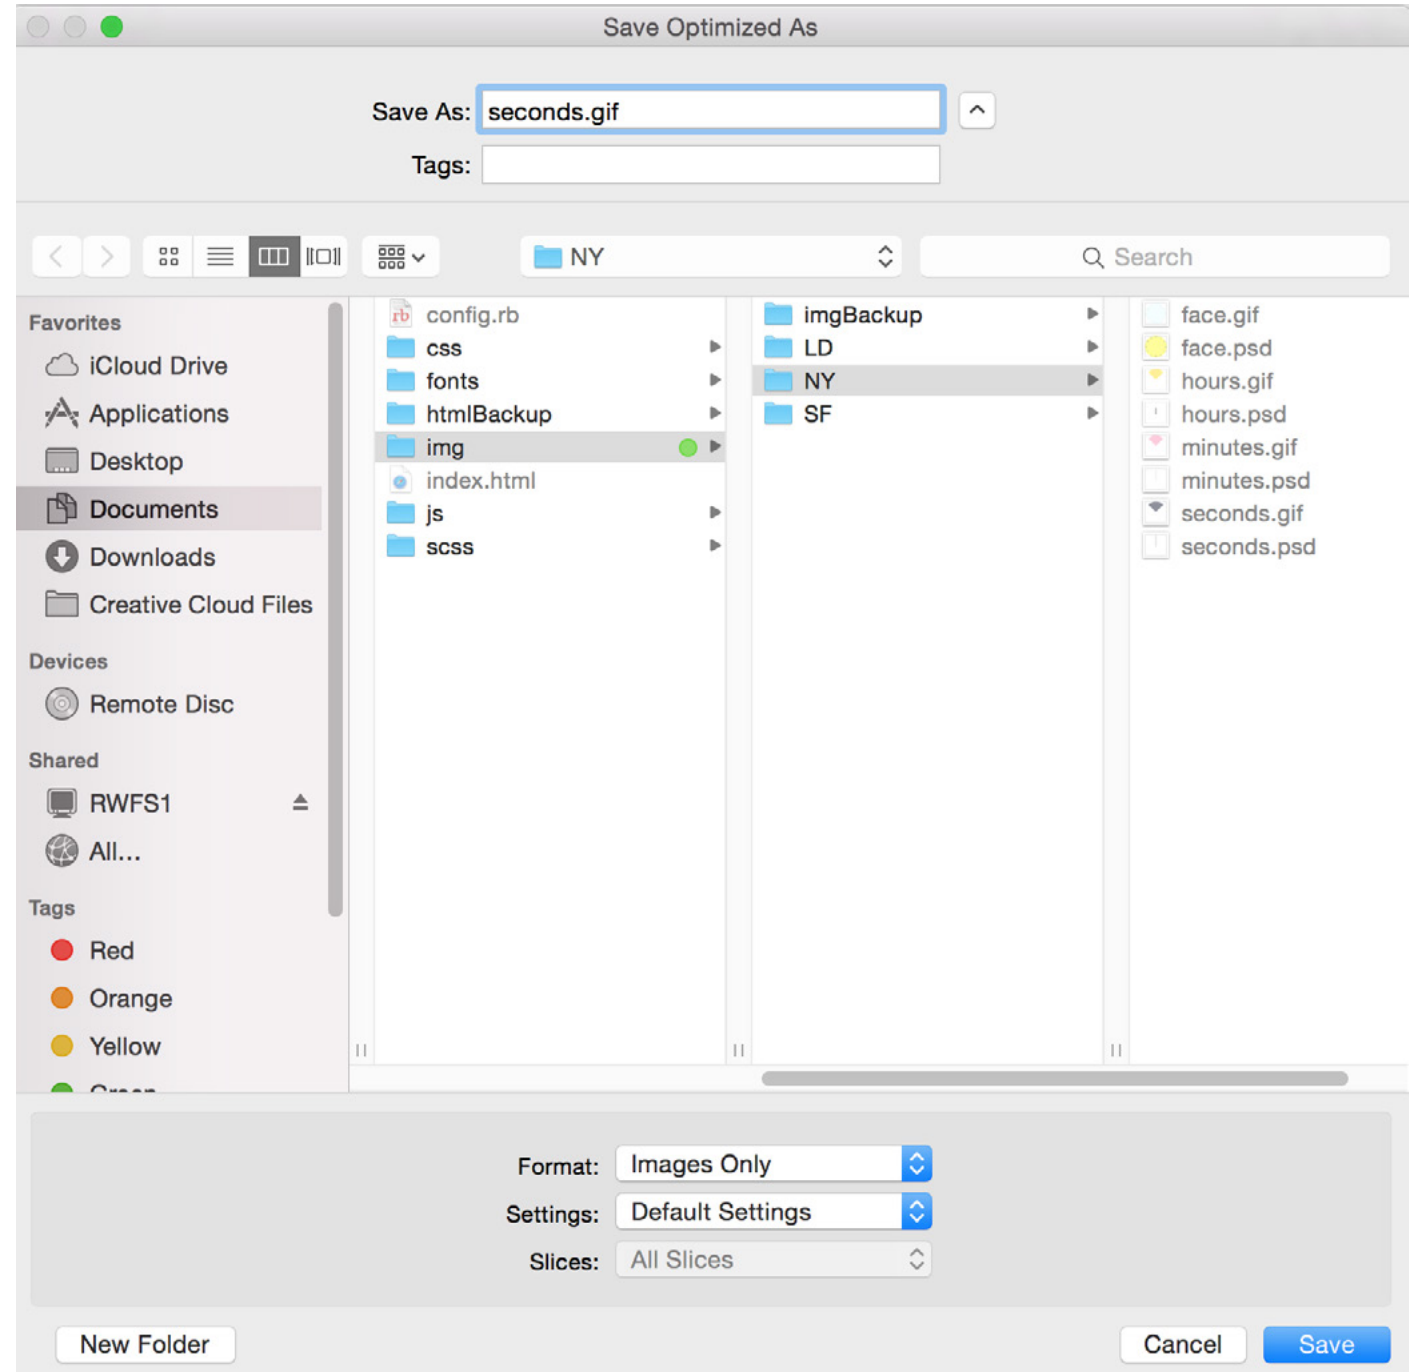

Save the GIF into the correct image folder.

If you work in San Francisco save the file to:
img > NY

If you work in New York, save the file to:
img > LD

If you work in London, save the file to:
img > SF

Once you've saved the image, repeat the process for all the other elements.

Step 6:

When you're done, you'll see that the clock has now changed to show your design.
